

25 Import and Export of SOAP Provisioned Data

25.1 Export and Mass Provisioning

Subscriber Management Mass Provisioning allows the mass processing of provisioning commands by way of the CLI platform. To facilitate the provisioning of subscribers and their services, script files (containing shorthand versions of provisioning commands) are used. This section describes the format of the scripts and how to use them.

The Subscriber Management Mass Provisioning utility loops through the processing all of the commands in the script file. Output results are printed to the computer screen; or, the user may redirect the output to a file.

Warning: *soapMassProv* is intended to be used for performing changes *en masse*. Naturally such activities should only be scheduled during service windows or staging time. During normal call processing hours, provisioning should be limited to casual day to day activities through the SOAP admin interface on the OSV as the advised choice, for optimum load balancing reasons e.g. using CMP/OSV-Assistant or customer sponsored applications.

25.1.1 Importing Subscriber Data

Subscriber data can be imported to the OpenScape Voice system using the *soapMassProv* executable, which accepts a file in the same format as is generated by *soapExport*.

The executable is invoked from within the RTP CLI (*startCLI*) expert mode by using the command *soapMassProv*, followed by a string of parameters enclosed within double quotes. The syntax to perform this is as follows:

From the expert mode prompt:

```
CLI>soapMassProv "-f=ProvisioningCommandFile"
```

where

ProvisioningCommandFile is a file containing the commands to execute. Refer to [Section 32.3, "Command Line Syntax"](#), on page 996 for a detailed description of the syntax of this file.

Import and Export of SOAP Provisioned Data

Export and Mass Provisioning

It is also possible to execute soapMassProv from the command line, as was supported in the past, but now this method is reserved for internal development and test purposes only, and therefore the operator ID and password parameters are required in addition to the parameters listed above. The command line syntax is as follows:

1. Telnet to the OpenScope Voice system as user "srx".
2. cd ../UNSPsubp
3. ./soapMassProv -o=*Operator* -pass=*Password* -f=*ProvisioningCommandFile*

Table 984 lists and describes the soapMassProv parameters.

Parameter	Type	Description
-f=filename	Command line parameter	Specifies the input file that contains mass provisioning commands to be processed. The valid syntax for this file is defined in the mp2.dat file and also later in this document.
-h=homeDirectory	Command line parameter	Specifies a directory that is different from the one from which the program is started. Used by the program to find configuration information. UNSPsubp is installed in /Unisphere/srx3000/UNSPsubp and it should be executed from there. If specified from another directory, specify -h=/Unisphere/srx3000/UNSPsubp.
-out=outputFile	Command line parameter	<p>Specifies an output file to which the following data is written:</p> <p>For successfully processed commands, the command from the import file is copied here, but commented out.</p> <p>For commands that failed for any reason, the command from the input file is copied here without comments.</p> <p>This means that, for example, in case of sequence problems, where some commands must be executed as a prerequisite for other commands, the output file can be reused as an input file for a second pass to complete the processing of those commands that failed the first time.</p>
-p=priority	Command line parameter	Specifies the priority at which this process it to be run, ranging from 0 to -60, where -60 is the default if the parameter is not provided.

Table 984 soapMassProv Parameters (Seite 1 von 2)

Parameter	Type	Description
-o=operatorId	Command line parameter	A string identifying the operator who is performing this action; only required when performing this action from the command line as opposed to via expert mode CLI.
-pass=password	Command line parameter	The password that is required in order to perform this action from the command line as opposed to via expert mode CLI.
-lins	Command line parameter	-lins=<lin list size> : exports defined lin list size -lins : exports all lins from Bg Subnet
-Mlhg	Command line parameter	-Mlhg=<DN> : exports Multiline Hunt Group <DN> -Mlhg : Exports ALL Multiline Hunt Groups
-LOT=<lotname>	Command line parameter	Exports <lotname> from the defined BG. -lins : exports all parking lots from the specified BG.
-EAC:BG=BGName	Command line parameter	BGName specifies a business group name. The result is a list of E/A Groups, members, relations and AuxLines.
-MSA=BGname:BOname	Command line parameter	BGname specifies a business group name, BOname specifies the branch office name. The result is a list of media server assignments to the specified branch office.
-passupdate	Command line parameter	Will prompt for the current password and give the option to update the mass provisioning password.

Table 984 soapMassProv Parameters (Seite 2 von 2)

If -StartDn, -c and -Mlhg are specified, all defined subscribers and multiline hunt groups inside this range are exported.

If -BG and -lins are specified, all lins from a BG subnet are exported.

If both -BG and -LOT are specified, all parking lots are exported. -LOT exports all parking lots, and -LOT=<lotname> exports a specific parking lot.

Usage Example for -passupdate

```
./soapExport -o=user -f=output-file -BG -passupdate
Enter current password to proceed:
Authentication OK
---Update password---
Type new password:
*****
Type new password:
*****
Password updated successfully!
```

25.1.2 Exporting Subscriber Data

Subscriber data can be exported from the OpenScape Voice system to a comma delimited file.

The executable is invoked from within the RTP CLI (startCLI) expert mode by using the command `soapExport`, followed by a string of parameters enclosed within double quotes. The syntax to perform this is as follows:

From the expert mode prompt:

```
CLI>soapExport "-f=outputfilename [-BG]-StartDN=StartDn [-c=count]"
```

It is also possible to execute `soapMassProv` from the command line, as was supported in the past, but now this method is reserved for internal development and test purposes only, and therefore the operator ID and password parameters are required in addition to the parameters listed above. The command line syntax is as follows:

1. Telnet to the OpenScape Voice system as user "srx".
2. `cd ../UNSPsubp`
3. `./soapExport -o=Operator -pass=Password -f=outputfilename [-BG]-StartDN=StartDn [-c=count]`

where *outputfilename* is the location to which the exported data is to be written.

BG indicates a specific BGName or all business group definitions

PNP specifies a NumberPlanName or the entire Private Numbering Plan

EP specifies an EndPointProfile or all End Point Profiles

QP specifies a QOS Profile or all QOS Profiles

FP specifies a Feature Profile or all Feature Profiles

StartDn is the subscriber to start with

NM specifies all the features of the Network Management interfaces

TS specifies the Tombstone table

count is the max number of subscribers to export

- If **-BG** and **-PNP** are specified, the Business Group will be exported with its own Private Numbering Plan.
- If **-BG** and **-StartDn** are specified, the Business Group will be exported with all its subscribers starting from the specified DN.

- If neither **-BG**, **-PNP**, or **-StartDn** are specified, the subscribers will be exported starting with the lowest numerical alphabetic.
- If **-NM=All** is specified, **-NM=<ObjectName>** will export only that object. For example,
 - `soapExport "-NM=All -f=/tmp/nm" ://` All objects
 - `soapExport "-NM=OfficeCode -f=/tmp/nm ://` Exports OfficeCodes

The output from *soapExport* can be used as input to *soapMassProv*.

Table 985 lists and describes the *soapExport* parameters.

Parameter	Type	Description
-f=filename	Command line parameter	Specifies the output file that will be generated with the comma-delimited data.
-o=operatorId	Command line parameter	A string identifying the operator who is performing this action; only required when performing this action from the command line as opposed to via expert mode CLI.
-pass=password	Command line parameter	The password that is required in order to perform this action from the command line as opposed to via expert mode CLI.
-BG=BGName	Command line parameter	Specifies a Business Group Name. If the parameter is provided with no value, all Business Group definitions are exported.
-EP = EPName	Command line parameter	Specifies an Endpoint Profile. If the parameter is specified with no value, all Endpoint Profiles are exported.
-FP = Feature Profile Name	Command line parameter	<p>Specifies a Feature Profile. If the parameter is provided with no value, all Feature Profiles are exported.</p> <p>Since Feature Profiles may or may not be associated with Business Groups, the following other possibilities apply:</p> <ul style="list-style-type: none"> • <code>FP ---</code> export all Feature Profiles • <code>FP=:</code> --- export all Switch Wide Feature Profiles • <code>FP=<fp> ---</code> export Feature Profile with Feature Profile Name = <fp> • <code>FP=:<bg> ---</code> export all Feature Profiles belonging to Business Group <bg> • <code>FP=<fp>:<bg> ---</code> export Feature Profile with Feature Profile Name <fp> belonging to Business Group <bg> <p>Note this means that if a Feature Profile is associated with a BG, the BG Name must be provided.</p>

Table 985 *soapExport* Parameters (Seite 1 von 3)

Import and Export of SOAP Provisioned Data

Export and Mass Provisioning

Parameter	Type	Description
-PNP=NumberPlan Name	Command line parameter	Specifies a NumberPlanName. If not specified, the BG must be specified, and the Private Numbering Plan associated with that BG is exported.
-DEST	Command line parameter	When included along with the -BG and -PNP options, indicates that all destinations for the given Numbering Plan are to be exported.
-NumMod=Number PlanName	Command line parameter	Specifies a NumberPlanName for which the Number Modification data is to be exported.
-TS	Command line parameter	Indicates that the contents of the Tombstone table are to be exported.
-StartDn=DN	Command line parameter	Indicates the starting Directory Number at which to start the export. If not specified, export starts with the numerically lowest DN provisioned on the system.
-c=Number	Command line parameter	Indicates the number of Directory Numbers to export. If not specified, or greater than 10,000 is specified, 10,000 will be exported.
-c2=Number	Command line parameter	Same as for the -c option, this parameter indicates the number of Directory Numbers to export; however, in this case, there is no limit to the number of exported DNs. Note that if the -c2 option is used on a heavily populated system, the result may be a long running command.

Table 985 *soapExport Parameters (Seite 2 von 3)*

Parameter	Type	Description
-NM=All -NM=<object>	Command line parameter	Indicates that Network Management objects are to be exported. If gAllh is specified, all supported objects are exported. Alternatively, an object name can be provided to export only that object. The currently supported Network Management objects are: <ul style="list-style-type: none"> • OfficeCode • HomeDn • ClassService • RateArea • CallingLocation • Destination • Endpoint • Route • Alias • MediaGateway • MediaGatewayCircuits • TimeDestination • DaySchedule • PeriodSchedule • WeeklySchedule • Intercept • Treatment • CarrierDestination • CarrierRoute • TrunkGroup • Trunk • OriginDestination • OriginRoute • SipReason • CodeProcess • OperatorEnum • EnumServer • EndpointProvider • EndpointLocation
-lins	Command line parameter	-lins=<lin list size> : exports defined lin list size -lins : exports all lins from Bg Subnet
-Mlhg	Command line parameter	-Mlhg=<DN> : exports Multiline Hunt Group <DN> -Mlhg : Exports ALL Multiline Hunt Groups

Table 985 soapExport Parameters (Seite 3 von 3)

If -StartDn, -c and -Mlhg are specified, all defined subscribers and multiline hunt groups inside this range are exported.

If -BG and -lins are specified all lins from a BG subnet are exported.

The soapExport exports the provisioning commands in the current version and outputs them to the file. This file can then be imported (using soapMassProv) with a version greater than or equal to the version output in the file.

Import and Export of SOAP Provisioned Data

Supported Commands

Beginning in Version 3.0, the SOAP Export and SOAP Mass Provisioning syntax is enhanced to improve its readability. Using the old style format was cumbersome due to the fact that the parameters were position-dependent and thus the mapping of data items to parameters was difficult to determine by examining the script file. Therefore, a new style of command is introduced consisting of a parameter = value format, making the parameters clearly identifiable and position independent.

Every command has the general format:

```
<command-name>
, <attribute1>=<value1>
, <attribute2>=<value2>
, <attribute3>=<value3>
..
, <attribute4>=<value4>
;;
```

Warning: Note one important restriction of this new format: The command and attribute names are reserved words. This means that if they are to be used as an input value for some attribute, they must be placed within double quotes. For example, to create a Business Group with the name "AF", which is a reserved command name, the following command could be used:

```
CBG
, BGNAME="AF"
, DISPLAYNUMBER=5619556559
```

Also note the following about SOAP Mass Provisioning:

- Files that have a file version with an "MP2" are parsed with the lex-yacc parser.
- C style comment syntax has been introduced. This allows large blocks of input file to be commented out if necessary with /* and */.

25.2 Supported Commands

The following subsections present the syntax for each of the supported commands. This information is also included in the deliverable file **mp2.dat**. For specific details about attributes, **please refer to this file**. Additionally, the files generated by SOAP Export now have the WSDL version included at the top of the file in order to clearly document the version of the switch from which the data was exported.

25.2.1 Add Features

```
<AF>
AF - Add Features to subscribers (Please see WSDL
API:unsp__UpdateSubscriberFeatures)
    ,SUBSCRIBERDN=<string>
    feat1
    ,feat1_attribute1=<value>
    ,feat1_attribute2=<value>
    feat2
    ,feat2_attribute1=<value>
    ,feat2_attribute2=<value>
    .
    .
    feath
    ,feath_attribute1=<value>
    ,feath_attribute2=<value>
</AF>
```

25.2.1.1 Supported Features

Following is a list of features supported by the Add Subscriber Feature (AF) command above along with their attributes. Note that in general, these features are also supported by the other subscriber feature listed below:

- MF - Modify Subscriber Feature
- IF - Reset Inherited Subscriber feature fields
- FPAF - Add Feature Profile Feature
- FPRF - Remove Feature Profile Feature
- FPMF - Modify Feature Profile Feature
- FPMFR - Modify Feature Profile Feature with Reset of Subs

  ,feath_attribute1=<value>
  ,feath_attribute2=<value>
</ABF>
```

25.2.8.1 Supported Features

Following is a list of features supported by the ABF command above along with their attributes. Note that these features are also supported by the RBF (Remove Business Group Features) command.

```
<CFBgDR>
BgDR - "Intra BG Distinctive Ringing" (Please see WSDL
API:unsp__UpdateBGFeatures)
,ENABLED=<bool>
</CFBgDR>

<CFBgE911LIN>
BgE911LIN - "BG E911 LIN Administration" (Please see WSDL
API:unsp__UpdateBGFeatures)
,DEFAULTEMERGENCYNUMBER=<string>
,DEFAULTINTERCEPTNAME=<string>
</CFBgE911LIN>

<CFBgHotDesk>
BgHotDesk - "The Hot Desking Configuration Service" (Please
see WSDL API:unsp__UpdateBGFeatures)
,AUTOLOGOFFTIME=<string>
</CFBgHotDesk>

<CFBgKS>
BgKS - "Keyset Operation BG only" (Please see WSDL
API:unsp__UpdateBGFeatures)
,MANUALHOLDRECALLTIMER=<int>
,LINERESERVATIONTIMER=<int>
</CFBgKS>

<CFBgLC>
BgLC - "Business Group Large Conference service definition"
(Please see WSDL API:unsp__UpdateBGFeatures)
,MINNUMBERPORTS=<int>
,MAXNUMBERPORTS=<int>
,MAXCONFERENCES=<int>
,MAXCONFERENCEMEMBERS=<int>
,CONFERENCECALLDISCTIMER=<int>
,PLAYENTRYEXITTONE=<bool>
,BLOCKLCONFRESTRICTEDPARTY=<bool>
</CFBgLC>

<CFBgNBCPU>
BgNBCPU - "Business Group Night Bell CPU service definition"
(Please see WSDL API:unsp__UpdateBGFeatures)
,ENABLED=<bool>
,NIGHTBELLCPUID=<int>
</CFBgNBCPU>

<CFBgSILM >
BgSILM - "The Hot Desking Configuration Service" (Please
see WSDL API:unsp__UpdateBGFeatures)
, MONITORTAGLIMIT <int>
, MAXNUMBEROFSUPERVISORS <int>
</CFBgSILM >

<CFBgSpDial>
```

Import and Export of SOAP Provisioned Data

Supported Commands

```
CFBgSpDial - "Bg System Speed Calling Lists" (Please see
WSDL API:unsp__UpdateSubscriberFeatures)
,ENABLED=<bool>
,LISTIDONE=<int>

25.2.10.1 Supported Features

Following is a list of features supported by the EPADDFEAT command above along with their attributes. Note that these features are also supported by the DPDELFEAT (Remove Endpoint Profile Features) command.

```
<CFCFID>
```

Import and Export of SOAP Provisioned Data

Supported Commands

CFID - "Call Forward Invalid Destination" (Please see WSDL
API:unsp__UpdateEpFeatures in Provisioning Doc for
Attribute details)
,ENABLED=<bool>
,ALTERNATETARGET=<string>
</CFCFID>

<CFEpCNAM>
EpCNAM - "Incoming Calling Name Delivery" (Please see WSDL
API:unsp__UpdateEpFeatures)
</CFEpCNAM>

<CFEPCISNAME>
EPCISNAME - Called Party Name Delivery (Please see WSDL
API:unsp__UpdateEpFeatures)
,NAMEDB=<enum>
</CFEPCISNAME>

<CFEpCT>
EpCT - "Endpoint Call Transfer" (Please see WSDL
API:unsp__UpdateEpFeatures in Provisioning Doc for
Attribute details)
,ENABLED=<bool>
</CFEpCT>

<CFEPTRS>
EPTRS - "Toll Restrictions" (Please see WSDL
API:unsp__UpdateEpFeatures in Provisioning Doc for
Attribute details)
,CORNAME=<string>
,ALTERNATECORNAME=<string>

feat1
feat2
.
.
featn
</EPDELFEAT>
```

25.2.15 Create Subscriber

There a number of different kinds of subscribers that can be created. The commands for all of them are listed below.

```
<CS>
CS - Base Subscriber Profile.All parameters available for
all types of subscribers. (Please see WSDL
API:unsp__CreateSubscriber2)
,SUBSCRIBERDN=<string>
,RETAILER=<string>
,ACCOUNTID=<string>
,BILLINGID=<string>
,CLASSOFSERVICE=<string>
,RATEAREA=<string>
,CALLINGLOC=<string>
,NUMBERPLANNAME=<string>
,BGNAME=<string>
,DISPLAYNAME=<string>
,UNICODEDISPLAYNAME=<string>
```

Import and Export of SOAP Provisioned Data

Supported Commands

```
,TIMEZONE=<string>
,PIN=<string>
,PUBLICPIN=<string>
,SUBSCRIBERSTATUS=<enum>
,INTERCEPTANNOUNCEMENT=<enum>
,NEWSERVICEID=<string>
,LANGUAGE=<string>

,CACNOTALLOWED=<bool>
,INTRIGPROCREQUIRED=<bool>
,DESTNEWCODE=<string>
,DESTCOUNTRYCODE=<string>
</DESTCODEMODIFY>
```

25.2.59 Remove Destination Code

```
<DESTCODEREMOVE>
DESTCODEREMOVE - Remove a Destination Code (Please see WSDL
API:unsp__DeleteDestCode2)
,DESTINATIONCODE=<string>
,CODEINDEXNAME=<string>
,NUMBERPLANNAME=<string>
,RATEAREA=<string>
,CLASSOFSERVICE=<string>
,NATUREOFADDRESS=<enum>
</DESTCODEREMOVE>
```

25.2.60 Create Number Plan

```
<NPCREATE>
NPCREATE - Creates a Number Plan (Please see WSDL
API:unsp__CreateNumberPlan2)
,NUMBERPLANNAME=<string>
,NUMBERPLANID=<int>
,BGNAME=<string>
</NPCREATE>
```

25.2.61 Remove Number Plan

```
<NPREMOVE>
NPREMOVE - Removes a Number Plan (Please see WSDL
API:unsp__DeleteNumberPlan2)
,NUMBERPLANNAME=<string>
</NPREMOVE>
```

25.2.62 Create Authorization Code

```
<AUTHCODECREATE>
AUTHCODECREATE - The authorization code to be used must be
between 2 and 14 characters. (Please see WSDL
API:unsp__CreateAuthCode)
,BGNAME=<string>
,COUNTAUTHCODELIST=<int>
,AUTHCODE_0=<string>
,AUTHCODE_1=<string>
,AUTHCODE_2=<string>
,AUTHCODE_3=<string>
,AUTHCODE_4=<string>

,AUTHCODE_16=<string>
,AUTHCODE_17=<string>
,AUTHCODE_18=<string>
,AUTHCODE_19=<string>
</AUTHCODECREATE>
```

25.2.63 Delete Authorization Code

```
<AUTHCODEDEL>
AUTHCODEDEL - Delete Authorization Code (Please see WSDL
API:unsp__DeleteAuthCode)
,BGNAME=<string>
,COUNTAUTHCODELIST=<int>
,AUTHCODE_0=<string>
,AUTHCODE_1=<string>
,AUTHCODE_2=<string>
,AUTHCODE_3=<string>
,AUTHCODE_4=<string>
,AUTHCODE_5=<string>
,AUTHCODE_6=<string>
,AUTHCODE_7=<string>
,AUTHCODE_8=<string>
```

```
,AUTHCODE_9=<string>
,AUTHCODE_10=<string>
,AUTHCODE_11=<string>
,AUTHCODE_12=<string>
,AUTHCODE_13=<string>
,AUTHCODE_14=<string>
,AUTHCODE_15=<string>
,AUTHCODE_16=<string>
,AUTHCODE_17=<string>
,AUTHCODE_18=<string>
,AUTHCODE_19=<string>
</AUTHCODEDEL>
```

25.2.64 Create Prefix Access Code

```
<APAC>
APAC - Create Prefix Access Code (Please see WSDL
API:unsp__CreatePrefixAccessCode2)
,NUMBERPLANNAME=<string>
,DIGITS=<string>
,DNMINLEN=<int>
,DNMAXLEN=<int>
,PREFIXTYPE=<enum>
,DIGITPOS=<int>
,DIGITSINSERT=<string>
,TRAILINGDIGITPOS=<int>
,NOA=<enum>
,DESTTYPE=<enum>
,DESTNAME=<string>
,CACLENGTH=<int>
</APAC>
```

25.2.65 Create PNP Location Code

```
<APNPLOC>
APNPLOC - Create PNP Location Code (Please see WSDL
API:unsp__CreatePnpLocationCode2)
,NUMBERPLANNAME=<string>
,LOCCODE=<string>
,LOCL0LEN=<int>
,LOCL1LEN=<int>
,LOCL2LEN=<int>
,LOCSKIPDIGITS=<int>
</APNPLOC>
```

25.2.66 Update PNP Location Code

```
<UPNPLOC>
UPNPLOC - Modify Update PNP Location Code (Please see WSDL
API:unsp__ModifyPnpLocationCode2)
```

Import and Export of SOAP Provisioned Data

Supported Commands

```
,NUMBERPLANNAME=<string>
,LOCCODE=<string>
,LOCL0LEN=<int>
,LOCL1LEN=<int>
,LOCL2LEN=<int>
,LOCSKIPDIGITS=<int>
</UPNPLOC>
```

25.2.67 Remove PNP Location Code

```
<RPNPLOC>
RPNPLOC - Remove PNP Location Code (Please see WSDL
API:unsp__DeletePnpLocationCode2)
,NUMBERPLANNAME=<string>
,LOCCODE=<string>
</RPNPLOC>
```

25.2.68 Update Prefix Access Code

```
<UPAC>
UPAC - Update Modify Prefix Access Code (Please see WSDL
API:unsp__ModifyPrefixAccessCode2)
,NUMBERPLANNAME=<string>
,DIGITS=<string>
,DNMINLEN=<int>
,DNMAXLEN=<int>
,PREFIXTYPE=<enum>
,DIGITPOS=<int>
,DIGITSINSERT=<string>
,TRAILINGDIGITPOS=<int>
,NOA=<enum>
,DESTTYPE=<enum>
,DESTNAME=<string>
</UPAC>
```

25.2.69 Remove Prefix Access Code

```
<RPAC>
RPAC - Remove Prefix Access Code (Please see WSDL
API:unsp__DeletePrefixAccessCode2)
,NUMBERPLANNAME=<string>
,DIGITS=<string>
,DNMINLEN=<int>
,DNMAXLEN=<int>
</RPAC>
```

25.2.70 Create PNP Extension

```
<APNPEXT>
APNPEXT - Create PNP Extension (Please see WSDL
API:unsp__CreatePnpExtension2)
,NUMBERPLANNAME=<string>
,EXTPREFIX=<string>
,EXTLEN=<int>
,LOCCODE=<string>
,E164PREFIX=<string>
,DESTTYPE=<enum>
,DESTNAME=<string>
</APNPEXT>
```

25.2.71 Update PNP Extension

```
<UPNPEXT>
UPNPEXT - Update Modify PNP Extension (Please see WSDL
API:unsp__ModifyPnpExtension2)
,NUMBERPLANNAME=<string>
,EXTPREFIX=<string>
,EXTLEN=<int>
,LOCCODE=<string>
,E164PREFIX=<string>
,DESTTYPE=<enum>
,DESTNAME=<string>
</UPNPEXT>
```

25.2.72 Remove PNP Extension

```
<RPNPEXT>
RPNPEXT - Remove PNP Extension (Please see WSDL
API:unsp__DeletePnpExtension2)
,NUMBERPLANNAME=<string>
,EXTPREFIX=<string>
</RPNPEXT>
```

25.2.73 Create Display Number Definition

```
<DNDCREATE>
DNDCREATE - "Create Display Number Definition" (Please see
WSDL API:unsp__CreateDNDefinition)
,NUMBERPLANNAME=<string>
,COUNTRYCODE=<string>
,AREACODE=<string>
,EXCHANGECODE=<string>
,E164SKIPDIGIT=<int>
,LOCATIONCODE=<string>
,LOCL2LEN=<int>
,LOCL1LEN=<int>
```

```
,LOCL0LEN=<int>  
,PNPSKIPDIGIT=<int>  
</DNDCREATE>
```

25.2.74 Delete Display Number Definition

```
<DNDELETE>  
DNDELETE - "Delete Display Number Definition" (Please see  
WSDL API:unsp__CreateDNDefinition)  
,NUMBERPLANNNAME=<string>  
,COUNTRYCODE=<string>  
,AREACODE=<string>  
,EXCHANGECODE=<string>  
,E164SKIPDIGIT=<int>  
,LOCATIONCODE=<string>  
,LOCL2LEN=<int>  
,LOCL1LEN=<int>  
,LOCL0LEN=<int>  
,PNPSKIPDIGIT=<int>  
</DNDELETE>
```

25.2.75 Create Display Number Prefix

```
<DNPCREATE>  
DNPCREATE - "Create Display Number Prefix" (Please see WSDL  
API:unsp__CreateDNPrefix)  
,NUMBERPLANNNAME=<string>  
,DNPCALLNUMBERPLANINDICATOR=<enum>  
,DNPCALLTYPEOFNUMBER=<enum>  
,NETWORKACCESSCODE=<string>  
,NUMBERPREFIXCODE=<string>  
</DNPCREATE>
```

25.2.76 Modify Display Number Prefix

```
<DNPMODIFY>  
DNPMODIFY - "Modify Display Number Prefix" (Please see WSDL  
API:unsp__ModifyDNPrefix)  
,NUMBERPLANNNAME=<string>  
,DNPCALLNUMBERPLANINDICATOR=<enum>  
,DNPCALLTYPEOFNUMBER=<enum>  
,NETWORKACCESSCODE=<string>  
,NUMBERPREFIXCODE=<string>  
</DNPMODIFY>
```

25.2.77 Delete Display Number Prefix

```
<DNPDELETE>
DNPDELETE - "Delete Display Number Prefix" (Please see WSDL
API:unsp__DeleteDNPrefix)
,NUMBERPLANNAME=<string>
,DNPCALLNUMBERPLANINDICATOR=<enum>
,DNPCALLTYPEOFNUMBER=<enum>
</DNPDELETE>
```

25.2.78 Create Display Number Modification

```
<DNMCREATE>
DNMCREATE - "Create Display Number Modification" (Please see
WSDL API:unsp__CreateDNModification)
,FROMNUMBERPLANNAME=<string>
,TONUMBERPLANNAME=<string>
,DNMTYPEOFNUMBERIN=<enum>
,DNMTYPEOFNUMBER=<enum>
,PRIVACYTYPE=<enum>
,OPTIMIZED=<bool>
</DNMCREATE>
```

25.2.79 Modify Display Number Modification

```
<DNMMODIFY>
DNMMODIFY - "Modify Display Number Modification" (Please see
WSDL API:unsp__ModifyDNModification)
,FROMNUMBERPLANNAME=<string>
,TONUMBERPLANNAME=<string>
,DNMTYPEOFNUMBERIN=<enum>
,DNMTYPEOFNUMBER=<enum>
,PRIVACYTYPE=<enum>
,OPTIMIZED=<bool>
</DNMMODIFY>
```

25.2.80 Delete Display Number Modification

```
<DNMDELETE>
DNMDELETE - "Delete Display Number Modification" (Please see
WSDL API:unsp__DeleteDNModification)
,FROMNUMBERPLANNAME=<string>
,TONUMBERPLANNAME=<string>
,DNMTYPEOFNUMBERIN=<enum>
</DNMDELETE>
```

25.2.81 Update Business Group Common Numbering Plan

```
<BGPARAMSMODIFY>
BGPARAMSMODIFY - "Update BG Parameters,
BGCommonNumberingPlan"
(Please see WSDL API:unsp__UpdateBGParams2)
,BGNAME=<string>
,BGCOMMONNUMBERPLANNAME=<string>
</BGPARAMSMODIFY>
```

25.2.82 Update Business Group Default QoS profile

```
<UBQOSP>
UBQOSP - "Update default QoS profile" (Please see WSDL
API:unsp__UpdateBGParams2)
,BGNAME=<string>
,QOSPROFILENAME=<string>
,QOSPROFILEBGNAME=<string>
</UBQOSP>
```

25.2.83 Create CAC Group

```
<CCG>
CCG - "Create a CAC Group" (Please see WSDL
API:unsp__CreateCACGroup)
,BUSINESSGROUPNAME=<string>
,BRANCHOFFICENAME=<string>
,CACGROUPNAME=<string>
,CACGROUPTYPE=<enum>
,ROUTERIPADDRESS=<string>
,INTERFACENAME=<string>
,ACCESSLINKTYPE=<enum>
,ROUTERIPADDRESS2=<string>
,INTERFACENAME2=<string>
,ACCESSLINKTYPE2=<enum>

API:unsp__modifyOperatorEnum for more details)
```

```
ModifyOperatorEnum
,OperatorEnumName=<string>
,OperatorEnumTier0ZoneName=<string>
,EnumServerName=<string>
,OperatorEnumUpdateFlags=<int>
<\ModifyOperatorEnum>
```

25.2.166 Remove Operator Enum

```
<RemoveOperatorEnum>
RemoveOperatorEnumRequest(Please see WSDL
API:unsp__removeOperatorEnum for more details)
RemoveOperatorEnum
,OperatorEnumName=<string>
<\RemoveOperatorEnum>
```

25.2.167 Set RTP Parameters

```
<RTPSET>
RTPSET - " Set the RTP parameters" (Please see WSDL
API:unsp__SetConfigParmData in Provisioning Doc for
Attribute details)
, RTPNAME=<string>
, RTPVALUE=<string>
</RTPSET>
```

25.2.168 Create Disconnect DN

This operation is specifically to allow the export of subscribers that have been previously disconnected so that they can be imported in the disconnected state into a new switch if necessary.

```
<CREATE_DISCONNECT_DN>
SERVICEID:
Type:string
Length:(1-15) Default:-
Mandatory:yes
Comment:"The service Id of the subscriber"
INTERCEPTANNOUNCEMENT:
Type:enum
Values:"[None Disconnect NumberChange]" Default:-
Mandatory:yes
Comment:"Default Intercept for the subscriber"
Type:enum
NEWSERVICEID:
Type:string
Length:(1-15) Default:""
Mandatory:no
```

```
Comment:"Used when a subscriber's ServiceId has changed"
</CREATE_DISCONNECT_DN>
```

25.2.169 Update Dn Reservation

```
<BGRESERVATION>
BGRESERVATION - "Get reserved dn's for a bg" (Please see
WSDL API:unsp__UpdateDnReservation in Provisioning Doc for
Attribute details)
,BGNAME=<string>
,BGDNOFFICECODE=<string>
,BGDNSTARTCODE=<string>
,BGDNENDCODE=<string>
</BGRESERVATION>
```

25.2.170 Create a Parking Lot

```
<PARKINGLOTCREATE>
PARKINGLOTCREATE - Creates a Parking Lot (Please see WSDL
API: unsp__CreateParkingLotRequest )
, BGNAME,=<string>
, PARKINGLOTNAME=<string>
, RECALLTIMER=<unsigned int>
, PARKINGSTART=<unsigned long int>
, PARKINGEND=<unsigned long int>
</PARKINLOTCREATE>
```

25.2.171 Update a Parking Lot

```
<PARKINGLOTUPDATE>
PARKINGLOTUPDATE - Update a Parking Lot (Please see WSDL
API: unsp__UpdateParkingLotRequest )
, BGNAME,=<string>
, PARKINGLOTNAME=<string>
, NEWPARKINGLOTNAME=<string>
, RECALLTIMER=<unsigned int>
, PARKINGSTART=<unsigned long int>
, PARKINGEND=<unsigned long int>
</PARKINLOTUPDATE>
```

25.2.172 Delete a Parking Lot

```
<PARKINGLOTDELETE>
PARKINGLOTDELETE - Delete a Parking Lot (Please see WSDL
API: unsp__DeleteParkingLotRequest )
, BGNAME,=<string>
, PARKINGLOTNAME=<string>
</PARKINLOTDELETE>
```

25.2.173 Add Community Group

```
<ACG>
ACG - Adds a Community Group" (Please see WSDL
API:unsp__AddCommunityGroup in Provisioning Doc for
Attribute details)
, SUBSCRIBERDN,=<string>
, PERIODICTONE=<string>
</ACG>
```

25.2.174 Add Community Group Member

```
<ACGM>
ACGM - Adds a Community Group Member" (Please see WSDL
API:unsp__AddCommunityGroupMember in Provisioning Doc for
Attribute details)
, SUBSCRIBERDN,=<string>
, COMNUMBER=<int>
, DESTNUMBER=<string>
, DESTNAME=<string>
, INCBLOCK=<bool>
</ACGM>
```

25.2.175 Modify Community Group

```
<MCG>
MCG - Modifies a Community Group" (Please see WSDL
API:unsp__AddCommunityGroup in Provisioning Doc for
Attribute details)
, SUBSCRIBERDN,=<string>
, PERIODICTONE=<string>
</MCG>
```

25.2.176 Modify Community Group Member

```
<MCGM>
MCGM - Updates a Community Group Member" (Please see WSDL
API:unsp__ModifyCommunityGroupMember in Provisioning Doc
for Attribute details)
, SUBSCRIBERDN=<string>
, COMNUMBER=<int>
, NEWCOMNUMBER=<int>
, DESTNUMBER=<string>
, DESTNAME=<string>
, INCBLOCK=<bool>
</MCGM>
```

25.2.177 Remove Community Group Member

```
<RCGM>
```

Import and Export of SOAP Provisioned Data

Supported Commands

```
RCGM - "Removes a Community Group Member" (Please see WSDL
API:unsp__RemoveCommunityGroupMember in Provisioning Doc
for Attribute details)
, SUBSCRIBERDN=<string>
, COMNUMBER=<int>
</RCGM>
```

25.2.178 Remove Community Group

```
<RCG>
RCG - "Removes a Community Group" (Please see WSDL
API:unsp__RemoveCommunityGroup in Provisioning Doc for
Attribute details)
, SUBSCRIBERDN=<string>
</RCG>
```

25.2.179 Update Subscriber Mobile Info

```
<UMI>
UMI - Updates Subscriber Mobile Info(Please see WSDL
API:unsp__UpdateMobileInfo
, SUBSCRIBERDN=<string>
, MOBILEFLAG=<bool>
, MAINDEVICEDN=<string>
, CELLDEVICENR=<string>
, MOBRINGDUR=<int>
, MAINRINGDUR=<int>
, CELLRINGDUR=<int>
</UMI>
```

25.2.180 Create Traffic Type

```
<TRAFFICTYPECREATE>
TRAFFICTYPECREATE - Create TrafficType (Please see wsdl API:
unsp__CreateTrafficType)
, TTNAME=<string>
</TRAFFICTYPECREATE>
```

25.2.181 Modify Traffic Type

```
<TRAFFICTYPEMODIFY>
TRAFFICTYPEMODIFY - Modify TrafficType (Please see wsdl API:
unsp__ModifyTrafficType
, TTNAME=<string>
, TTNEWNAME=<string>
</TRAFFICTYPEMODIFY>
```

25.2.182 Delete Traffic Type

```
<TRAFFICTYPEDELETE>
TRAFFICTYPEDELETE - Delete TrafficType (Please see wsdl API:
unsp__DeleteTrafficType
,TTNAME=<string>
,TTNEWNAME=<string>
</TRAFFICTYPEDELETE>
```

25.2.183 Create Class Of Restrictions

```
